Most decorative wall upholstery fabrics are not made with the home theater in mind. They are too dense to allow sound to reach the acoustical treatments or speakers behind them. Our designer-friendly, specially-woven and tested collection of acoustical fabrics features a wide variety of exciting design patterns and colors and can be used safely over both acoustical treatments and speakers. CINEAK’s collection of acoustical transparent fabrics features 7 unique design patterns, each pattern is available in 6 to 12 different color patterns. All fabrics have been acoustically tested and have passed the requirements and expectations of some of the most-respected acousticians in the world.

All fabrics are a 100% Polyester, come in 54” width and pass CA Technical Bulletin 117, Section E.
